

6856 Adblue Filling Funnel

Part No: 6856

Price: £22.95 (exc VAT) | £27.54 (inc VAT)

Specifications

6856 Adblue Filling Funnel

Designed to screw directly on to the AdBlue® tank filler neck where the tank is fitted with a vertically accessed filler (Boot floors, under bonnet areas etc.).

The funnel valve allows the user to stop the filling process even when there is fluid still in the funnel to help avoid over filling the tank and spillage.

Additional Information

For safe transfer of adblue from storage containers to the vehicle tank.

Equipped with manually operated anti-spill valve

1100 ML transparent funnel with scale

Equipped with a lid to keep out dirt and debris when not in use

Air breather pipe to allow air out of the tank, prevent splashing caused by bubbling and help prevent over filling

AdBlue diesel exhaust fluid is an additive used on many makes of modern diesel engine.

To make adBlue filling easier, Laser Tools have introduced these AdBlue Filling Funnels specially designed to screw directly onto the AdBlue filler neck.

They make the AdBlue filling process quick and easy, and best of all — messy spillage can be easily avoided!

Screw the funnel straight on to the AdBlue filler neck then lift the internal anti-spill valve.

The funnel is large with a generous 1.1 litre capacity.

Keep filling until the AdBlue fluid stops flowing into the vehicle's reservoir, then simply drop down the internal valve.

Now unscrew the funnel and lift it clear.

There will no leaks or mess as you transfer the unused fluid back into the original container and leave a full AdBlue reservoir on the vehicle.
