## Exol Trojan 220 Gear Oil 25 Litre G004D00

**Part No:** G004D00

**Price:** £105.95 (exc VAT) | £127.14 (inc VAT)

### Specifications

Exol Trojan 220 Gear Oil 205 Litre G004B01

The Trojan grades are a range of specially formulated extreme pressure industrial gear oils.

There is a multiplicity of gear units available today, which vary in design, speed, materials, loading characteristics, operating temperatures and method of application.

The trend towards gear manufacture has resulted in higher capacity power transmission from smaller more compact units.

Gear units can be divided into the following types:

Gears on parallel shafts - Spur, helical and herringbone.

Gears on intersecting shafts - Straight and spiral bevel.

Gears on crossed shafts - Skew, worm and hypoid.

All of these might be lubricated by splash feed, pump feed or oil bath.

To meet these varying demands the Trojan range of industrial gear oils have been formulated using high quality solvent refined base oils and extreme pressure additives.

They are available in varying viscosities to meet the exact demands of gearbox requirements.

Benefits:

Extreme pressure additives for extended gear box life

Compatible with most types of seal

Excellent oxidation stability

Specification:

US Steel 224 AGMA 250.04 & 9005-D94

David Brown S1.53.101

Cincinnati Milacron P-74 (C-220)

DIN 51517 Part 3
