Colour: Clear. 20gm

Equivalent to Loctite Ref: 454

Our range of strong fast-acting cyanoacrylates adhesives are suited for a variety of industrial and engineering applications.

Cyanoacrylate adhesives cure through reaction with moisture held on the surfaces to be bonded.

They require close fitting joints and usually solidify in seconds which has resulted in the universal

generic name of "superglues".

Gelled variants are also available to allow curing of wider gaps wider and ideal for vertical and overhead surfaces.
