

Air conditioning charging stat Konfort 650E

Part No: VPM8850

Price: £5142.96 (exc VAT) | £6171.55 (inc VAT)

Specifications

To comply with the safety and environmental regulations which are leading to lower systems refrigerant volumes, vehicle systems now require more accurate refrigerant and lubricant recharging. TEXA professional A/C service equipment KONFORT 650E 09 has been developed to operate efficiently on all modern A/C systems with respect to vehicle manufacturers recommendations and modern technicians expectations. The KONFORT 650E 09 gives the operator the choice between an automatic operating mode or a programmable operating mode: The automatic mode uses a vehicle database that includes the refrigerant charging data and compressor oil specs for many of the vehicles available in Europe today. Oil and UV tracer are automatically controlled by three electronic high precision scales. The inbuilt database can be periodically updated as new vehicle models are released into the market. The programmable mode allows selection of an individual operating phase and gives the user the freedom to customise each of the parameters, to set a specific configuration to meet vehicle requirements. The vehicle Database has been added to a SD memory card which allows vehicle database to be updated directly from the SD card, simplifying the update procedure. The SD card also automatically records all the service procedures that have been carried out using the KONFORT, and these can be viewed or printed via a PC. The database also records the service history of the machine including refrigerant usage and operational times. Inbuilt database for the following manufacturers: Case International, Ford New Holland, John Deere, Massey Ferguson, Challenger, Class, Deutz, Fendt, Lamborghini, Landini, Same and Valmet.
