Price: £233.33 (exc VAT) | £280.00 (inc VAT)

Specifications

XMS25TLIFTTP Stanley FatMax TradeLift Twin Pack in Bag

This Exclusive XMS FatMax® Tradelift™ Twin Pack, built by STANLEY, that will give a dual lift to your construction work tasks.

Each comes with push down lever, allowing you the user to push down on the handle for easier lifting of heavy loads as opposed to a trigger style mechanism, 8mm per stroke.

There is also an incremental lowering tab lowering the lift plate 2.5mm per toggle for fine adjustments.

Each of the Jacks are fitted with an overmould handle for improved comfort and grip.

A recessed full release acts as a safety feature preventing accidental activation of full release.

Their enclosed metal plate housing provides improved durability, this prevents dust and debris from entering the tool.

The enlarged base plate is extended at the rear for added stability.

An angled edge makes it easier to slide the base under objects.

Anchor points with countersunk screw holes allow the user to fasten the lift down for added stability.

Ideal for use in a wide variety of work environments and trades; such as kitchen fitters, door/window fitters, carpenters, joiners, drywallers, flooring installers and general construction.

Examples of application; lifting and levelling kitchen units, nudging heavy objects in to place, lifting and holding doors in place, fitting windows, etc.

Comes in a bag to transport easily.

An individual Tradelift™ Specification:
